### Career Objective

To secure a role in a forward-thinking organization that addresses real-world challenges, where I can leverage my MERN stack and UX design expertise to build impactful, user-centric solutions. As a quick learner who readily adopts new technologies, I use AI-driven strategies to streamline development processes and deliver innovative products efficiently. I seek opportunities to continuously broaden my skill set and make a meaningful difference through problem-solving and collaboration.

### About

My journey began with learning Python fundamentals, which sparked my interest in technology. Although I initially explored machine learning, I soon found my passion in web development with JavaScript and React. Building several projects led me to an internship where I discovered the critical role of user experience. This motivated me to pursue UX design through online courses and a Google certification, enabling me to create digital products that are both robust and user-friendly.

### Professional summary

- Worked as a UX Designer and Web Developer Intern at Techwarium from Aug 2024 to Oct 2024.
- Worked as a UX Designer and Web Developer Intern at Techwarium from Dec 2024 to Feb 2024.
- Passionate MERN stack developer and UX designer with a strong foundation in Python, JavaScript, and React.
- Certified in [Foundations of User Experience \(UX\) Design by Google](#), with proven ability to create intuitive and engaging digital products.
- Demonstrated collaborative skills by working effectively in team environments, contributing to both development and design efforts.
- Committed to continuous learning and applying best practices to enhance user experience and application performance.
